

Information Security

Search: A new superpower for the Chief Security Officer

Discover & manage all of your sensitive information across file shares, shared drives, mail servers, the Cloud and secure what really matters - with ease.

Does your unstructured information pose a risk?

In every organisation the unstructured information on your network represents the 'wild west' of the security landscape - ungoverned and seemingly ungovernable. Not only does this make information difficult to find and use, it makes the job of managing the security risks seem insurmountable.

The traditional approach to securing data has been to harden systems and borders. This rather medieval approach to security, building ever higher and thicker walls around your organisation can only work whilst the whole organisation's value can be contained within those walls. With the advent of Cloud, mobile computing and ever extending supply chains, we need a more modern approach.

On average, an organisation's data contains...

It's not what you know - it's finding the unknowns

Putting your information at the centre of security overcomes this challenge. Understanding what you have, where it is, how old it is and who has access to it enables you to tidy up, tighten up and ensure the most sensitive and valuable information is looked after best.

Use our machine learning to intelligently classify your information

Whether your core concerns are information security, management, governance or risk, Exonar enables you to find out everything you need to know about your unstructured data, prioritise your most important information and get it under control.

Simply plug it in

By connecting the Exonar platform to your fileshares, shared drives, mail servers and Cloud storage systems, you will instantly gain a clear and holistic view of your organisation's unstructured information.

Our technology enables you to manage billions of documents and petabytes of files so that you can understand and index them. It will gather intelligence on what's where, how sensitive it is (regardless of how it's marked, mis-marked or even if it's unmarked) and whether or not it's duplicated. You can drill into individual files about the same subject wherever they are located and regardless of their format. Now you've identified those files, you can make them secure.

- **Discover** your most sensitive and valuable information.
- **Understand** exactly what it contains and where it is to create a clear information inventory.
- **Act** to bring it into policy quickly and monitor it accurately thereafter.

We use indexing - not scanning - to deliver instant results and iterative queries. Our machine learning understands what's important, where it is and who has access to it to save you time. Our platform operates in near real-time - so once you've completed an initial audit, simply switch to monitor and maintain mode with alerts and integrations to your other information management platforms. Exonar gives you the power to discover, understand and remediate sensitive corporate and personal data, strengthening information security and easing compliance with data regulations – no matter how much data you hold.

Find & Fix Your Data Understand & manage information instantly, simply, at scale.

Exonar solves a problem common to all organisations and their information owners, "I just don't know what I've got".

Plug Exonar into your network to instantly discover:

Confidential documents | Duplicate files | Employment contracts
Encryption keys | Personal data | Passwords ... whatever you need to find.

Achieve successful:

Compliance with regulations such as GDPR | Right of access request processing | Information security & governance
Risk management | Document retention | Cloud migration and governance.

Connect to a range of data sources:

Windows | SharePoint | Exchange | Office 365 | OneDrive
Databases and business systems.

Connecting Exonar to your network is simple and our dashboards are easy to use. Once installed, our crawlers will begin to index your data and deliver results on the same day.
